NELSON ANALYTICAL LAB

ISO 17025:2017 Accreditation
ANAB Certificate Number: AT-2169
Maine CDC Accreditation MTF001
Office of Marijuana Policy MTF328

Report Date: 16 September 2021

Stoner & Co.:
414 Hill St. Biddeford ME , 04046:

Enclosed are the results of analytical testing performed on the following samples:

Laboratory ID	Sample Location	Date sampled	Date received
C21090284.01	Cookie & Cream	14-Sep-21 00:00	15-Sep-21 07:50
C21090284.02	Milk Chai Truffle	14-Sep-21 00:00	15-Sep-21 07:50
C21090284.03	Ginger Lime	14-Sep-21 00:00	15-Sep-21 07:50

If you have any questions concerning this report, please feel free to contact the laboratory at 207-467-3478.

Lorri Maling
Laboratory Director

Weight of edible submitted	3.0421		g		09/15/2021 22:54	HPLC SOP-7	LAM	N/A	

Results as reported above relate only to samples as submitted, unless specifically noted otherwise.

Notes and Definitions

Note: All sample results are based on samples as they are received. Not all potential/existing hazards were tested. Unless otherwise noted below, analyses were performed without significant modifications and QC met the quality standards outlined in the methods reported. For purposes of reporting the terms marijuana and cannabis are used interchangeably. The Pass/Fail column on the report references Maine Adult Use acceptance limits. The State of Maine does not require Medical Marijuana or Hemp to meet these acceptance limits currently.

Results for the Maine Adult Use program are entered into the Metrc system. Due to reporting requirements some results are entered in Metrc as Zero. This is not scientifically accurate. Please refer to the final pdf report for the accurate reporting information.

Heat activation of cannabis products converts THCA to THC and CBDA to CBD in a time and temperature dependent manner. This conversion is known as decarboxylation and results from the loss of CO₂ during heating.

Total THC (Max THC) = Delta 9 THC + (THCA x 0.877)- Calculation required for Maine Adult Use program

Total THC (Max THC+D8) = Delta 8 THC + Delta 9 THC + (THCA x 0.877)

Total CBD (Max CBD) = CBD + (CBDA x 0.880)

Nelson Analytical is accredited for testing by ISO/IEC 17025:2017 and certified by ME CDC for the following parameters only:

Cannabinoids: Cannabinol (CBN), Cannabidiol (CBD)*, Cannabidiolic Acid (CBDA)*, Cannabigerol (CBG), Cannabigerolic Acid (CBGA), Cannabichromene (CBC), delta-9-THC*, delta-8-THC, THCA-A*, Tetrahydrocannabivarin (THCV), Cannabidivarin (CBDV) by High Pressure Liquid Chromatography (HPLC). Internal SOP-1/SOP-7 Analysis of Cannabinoids *NOTE: ME CDC certification for CBD, CBDA, Delta 9 THC and THCA-A, Total THC and Total CBD.

Homogeneity (Internal SOP-1/SOP-7 Analysis of Cannabinoids)

Visual Inspection - Foreign Material Testing (Internal SOP-24-Visual Inspection)

% Moisture (Loss on drying) (Internal SOP 59 - % Moisture)

Metals Preparation and Analysis: Arsenic, Cadmium, Lead and Mercury (SOP-17- ICP MS based on EPA 200.8)

Mycotoxins: Total Aflatoxin and Ochratoxin by ELISA - Internal SOP-4 Total Aflatoxin and Ochratoxin

Yeast and Mold (based on AOAC Method 997.02/2014.05), Total Coliform and E. coli (based on AOAC Method 991.14) E. Coli P/A (based on AOAC 991.14 Modified with enrichment before plating), Aerobic Plate Count (based on AOAC Method 990.12), Enterobacteriaceae (based on OMA 2003.01), Salmonella (based on AOAC 2014.01) SOP-3-Microbiological analysis by Petri Film.

Water Activity (SOP-53-Water Activity-based on ASTM D81918)

< or ND - Analyte result not detected above the method reporting limit.

All sample results are reported on an "as received" basis.

Edibles are reported in mg/serving. The serving size is defined by the customer for Adult Use testing.

If the serving size is not defined by the customer (for R&D or Medical testing), the number reported is based on the weight of one unit of the product or as defined on the customer label.

The mg/serving reported are based on weights of the serving size taken at the laboratory. The mg/package results reported are based on information supplied by the customer.

Edible conversion calculation: mg/g in serving x weight of serving = mg per serving

Mg/package conversion: mg/serving x servings per package = mg/package

Laboratory uncertainty is calculated and updated on a regular basis and will be reported with lab results as needed or requested.

Samples are extracted and analyzed on the same day unless otherwise noted.

Cannabinoids, Residual Solvents and Terpene Analysis are based on laboratory developed methods. All other test methods are based on established EPA, USP or FDA methods.

Matrix matched quality control check samples for marijuana are available for microbiological analysis in a hemp-based QC. Other matrix matched quality control samples for most matrices may be available for hemp but do not currently exist in marijuana. Due to this unavailability, even ISO/IEC validated methods cannot be fully verified for the efficiency and accuracy of the marijuana extraction and analysis in any current Maine Testing facility.

To convert mg/ml to a % percentage move the decimal place one to the left.

Medical Marijuana and Hemp are not currently regulated in the State of Maine. For your reference, the limits listed in the rules for Maine Adult Use Testing as specified by the Maine Office of Marijuana Policy testing are listed below.

Water Activity and Moisture Content

If the water activity in a dried flower production batch sample is at or below, 0.65 A_w , the sample will be designated with “pass”. If the water activity in a dried flower production batch sample greater than 0.65 A_w , the sample will be designated with “fail”.

If the water activity in solid and semi-solid edible marijuana products that do not require additional preservation (e.g. refrigeration) is at, or below, 0.85 A_w , the sample will be designated with “pass”. If the water activity is greater than 0.85 A_w , the sample will be designated as “fail”.

Visual Inspection for Filth and Foreign Material

The samples shall not pass if any living or dead insect, at any life cycle stage; one hair; or one count of mammalian excreta is found or if one fourth of the total area is covered by mold, sand, soil, cinders, dirt or imbedded foreign material.

Homogeneity of cannabinoids

Total THC and, if applicable, Total CBD values between samples must not vary by more than 15% or the product fails testing.

THC per serving and per package

The concentration in any marijuana product may not exceed 10 milligrams per serving of THC.
The concentration in any marijuana may not exceed 100 milligrams per package of Total THC.

Microbiological Contaminants in CFU/g

Marijuana Material	Total Viable Aerobic Bacteria	Total Yeast and Mold	Total Coliform Bacteria	Enterobacteriaceae	E. coli and Salmonella (spp.)
Unprocessed and Processed Plant Material and Marijuana Products	100,000	10,000	1000	1000	<1/g sample (pass)
CO ₂ and Solvent-Based Extracts	10,000	1000	100	100	<1/g sample (pass)

Heavy Metals testing

Note: Heavy Metals tests are not included in the required analysis at this time. The limits below are listed for reference if voluntary testing is performed.

Heavy Metal	Inhalation	Ingestion or Suppository	Topical Application
Cadmium (Cd)	200 ug/kg	500 ug/kg	5000 ug/kg
Lead (Pb)	500 ug/kg	500 ug/kg	10,000 ug/kg
Arsenic (As)	200 ug/kg	1500 ug/kg	1000 ug/kg
Mercury (Hg)	100 ug/kg	3000 ug/kg	1000 ug/kg

Note: Residual Solvent and Pesticide limits are listed in the Adult Use testing rule from the Office of Marijuana Policy. These tests are not included in the required analysis at this time.

QUALIFIER DEFINITION

NELSON ANALYTICAL LAB

REPORT OF ANALYSIS
Laboratory ID: C21090284

NH ELAP Accreditation #NH2018
Maine State Certification # ME00015
Maine Radon Certification # ME17500

Qualifier Definition

Sampling performed by the lab is according to the lab document "Water Sampling Instructions". EPA standards list pH & Chlorine as field parameters which should be tested immediately upon sample collection. Samples tested for pH after submission are beyond the hold time. Samples will be analyzed as quickly as laboratory operations allow. Metals samples preserved and analyzed on the same day do not meet the method criteria. # -Sample(s) received at laboratory do not meet method specified temperature criteria.

Solid samples are reported on a dry weight basis unless noted otherwise.
